

# ENERGY POLICY OF MOL PLC.

One of the most significant economic, social and environmental problems of mankind and an especially important issue of the sustainable development is the climate change caused by the emitted greenhouse gases.

The production and processing of oil and gas industry raw materials is an excessively energy-intensive process. The continuous improvement of our energy consumption efficiency increases not only our competitiveness but supports the sustainable management of natural resources and the conservation of our environment for the next generations.

MOL Plc. is committed to increase energy efficiency and energy performance of its own operated facilities. It is supported by the introduction and operation of an energy management system covering all activities of the organization which complies with the ISO 50001 standard.

Our energy management system with its tools and applied methods ensures the continuous energy performance development of the Company, the consistent execution of the formulated provisions, their monitoring and the achievement of the set efficiency improvement goals according to the followings:

- › we follow our energy performance and energy efficiency as well as is related to set of emission of greenhouse gases,
- › we ensure adequacy of rigorous legal specifications and obligations,
- › we aim at applying up-to-date, energy-efficient and innovative solutions during developments which we build in our processes of procurement and investment.
- › we pay attention to energy aspects during operation of our facilities and technologies so that we increase efficiency of energy consumption and reduce energy losses,
- › we commit ourselves to increasing proportion of utilization of renewable energy resources
- › we broaden abstract and professional knowledge of our colleagues especially to enhance energy awareness
- › we make available our targets and we provide constantly information on our initiations and results furthermore we inspire our colleagues to share their ideas about energy efficiency
- › we co-operate our partners and subsidiaries and we share our experiences about operation of our energy management system.

Our personal responsibility is continuous and effective operation and development of our energy management system.
